1.2 Purpose

The purpose of the **Release Notes** document is to communicate major new features and changes in this release of the THINC-API for Lathe libraries. It also documents known problems and workarounds.

1.3 Scope

This document describes the Public Release version 1.26.1.0 of THINC-API for Lathe.

1.4 Definitions, Acronyms, and Abbreviations

GAC – Global Assembly Cache Windows folder located in 'C:\WINDOWS\assembly'

1.5 References

None.

2. About This Release

All applications compiled with Beta Release from version 1.15.X.X must be compiled with Public Release version 1.17.0.0 or higher when it is available.

In current version of THINC-API, some of the existing functions related to ATC, Tool, TailStock, and Chuck Data from DATA-API or Command API might not function correctly on OSP-P300S (SLP) and OSP-P300L control.

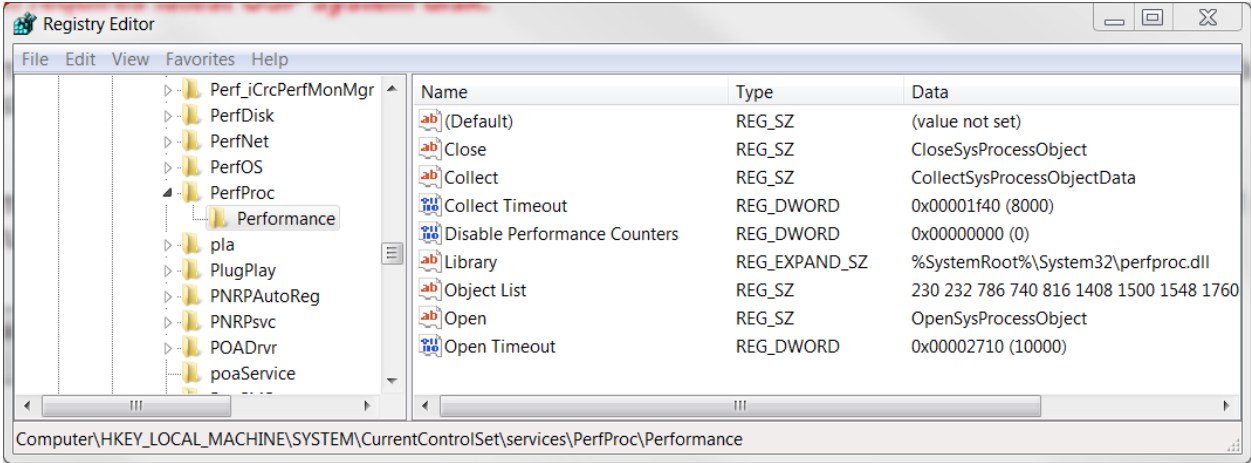

Please refer to the help file for detail usage and compatibility information of each function.
This version requires latest OSP system disk.

From this release and forward, THINC API libraries will check dependency libraries during installation. THINC API will fail to install if version of dependency OCJ libraries cannot support current version of THINC API.

| | |
|-------------------------|-----------------------|
| THINC-API | Version: S5015-008-38 |
| Release Notes For Lathe | Date: 06/28/2024 |

From this release and forward, THINC-API libraries can support either legacy license file name, okuma.api.lic or new OAC license file named okuma.api.xml. Only new OAC license file can support alphanumeric machine serial number. If both license files existing in the license folder, only OAC license file named okuma.api.xml is used to check for valid license.

From this release and forward, API Notifier will delay the checking of API for an approximately of 1 minutes or so after NC is running. API Notifier service does use Windows Performance Counters service. As a result, API Notifier will not run correctly if Windows Performance Counters service is not enable. During the installation of THINC-API, Windows Performance Counters will be reset to 0 in the Windows system registry as shown below:

The API Notifier status displayed in the system tray on the previous OSP-P controls such as P300/200/100II can be also checked by clicking on the shortcut of API Notifier on OSP-P500 VKEY.

Libraries included in this release for Lathe are compiled with .NET Framework 4.0:

- Version of Okuma.CLDATAPI.dll in this release is 4.2.0.0
- Version of Okuma.CLCMDAPI.dll in this release is 4.1.0.0
- Version of APINotifierService.exe in this release is 1.26.1.0
- Version of APINotifierStatus.exe in this release is 1.4.0.0
- Version of Okuma.Flexnet.Net4.dll in this release is 1.0.0.0
- Version of Okuma.Apilog2.dll in this release is 1.2.0.0

This release requires OCJ custom API version 004B on target machine. THINC-API will verify the existing of OCJ custom API version before performing the installation.

The PLC system package listed in the table per control type is also required.

| | |
|------------------|-------------------------------------|
| OSP | PLCS package |
| P100II/P200 | From 110A to 110C |
| P200A Type1 | From 120A to 130A |
| P200A Type2/P300 | From 201B to 201G, or 300A and over |

| | |
|-------------------------|-----------------------|
| THINC-API | Version: S5015-008-38 |
| Release Notes For Lathe | Date: 06/28/2024 |

Important: All applications designed with THINC-API libraries must use THINC-API version 1.21.1.0 or higher to be able to run on Microsoft Windows 10.

Starting from the public release, version 1.24.0.0, all previous versions of THINC-API installed on machine must be first un-installed before installing newer versions.

The following functions of Okuma.CLDATAPI.dll library will not be available in OSP-P100II control machines:

| Classes | Interfaces |
|----------|---|
| CMachine | OnOffStateEnum GetNCStatus(NCStatusEnum enNCStatus) |
| CMachine | CCurrentAlarm* GetCurrentAlarm() |
| CIO | OnOffStateEnum GetUserTaskIOVariable(IOTypeEnum enIO, Int32 intIndex) ; |
| CIO | void SetUserTaskOutputVariable(Int32 intIndex, OnOffStateEnum enValue) ; |
| CIO | OnOffStateEnum GetProtectedUserTaskOutputVariable(Int32 intIndex) ; |
| CIO | void SetProtectedUserTaskOutputVariable(Int32 intIndex, OnOffStateEnum enValue) ; |

The following functions of Okuma.CLCMDAPI.dll library will not be available in OSP-P100II control machines:

| Classes | Interfaces |
|----------|--|
| CATC | Sub RegisterToolPot(ByVal intPotNo As Integer, ByVal intToolNo As Integer, ByVal enSettingToolKind As SettingToolKindEnum, ByVal enSettingToolSize As SettingToolSizeEnum, ByVal enReturnMagazine As ReturnMagazineEnum) |
| CATC | Sub SetNextTool(ByVal intToolNo As Integer, ByVal enSettingToolKind As SettingToolKindEnum, ByVal enSettingToolSize As SettingToolSizeEnum, ByVal enReturnMagazine As ReturnMagazineEnum) |
| CATC | Sub SetToolInStation(ByVal intToolNo As Integer, ByVal enSettingToolKind As SettingToolKindEnum, ByVal enSettingToolSize As SettingToolSizeEnum, ByVal enReturnMagazine As ReturnMagazineEnum, ByVal enTurretStation As TurretStationEnum) |
| CATC | Sub UnRegisterToolPot(ByVal intPotNo As Integer) |
| CProgram | CancelMainProgram() |
| CProgram | SelectMainProgramRSide(ByVal strMainProgramFileName As String, Optional ByVal strSubProgramFileName As String = "", Optional ByVal strSystemSubstituteProgramFileName As String = "", Optional ByVal strProgramName As String = "") |
| CProgram | SelectMainProgramLSide(ByVal strMainProgramFileName As String, Optional ByVal strSubProgramFileName As String = "", Optional ByVal strSystemSubstituteProgramFileName As String = "", Optional ByVal strProgramName As String = "") |
| CTools | CalcualteToolOffset(ByVal intToolNo As Integer, ByVal enAxisIndex As OffsetAxisIndexEnum, ByVal enSubSystem As SubSystemEnum, ByVal dblValue As Double) |
| CTools | AddConstantToolOffset(ByVal intOffsetNo As Integer, ByVal enAxisIndex As OffsetAxisIndexEnum, ByVal enSubSystem As SubSystemEnum, ByVal enCuttingPosition As CuttingPositionEnum) |
| CTools | AddConstantNoseRadiusCompensation(ByVal intOffsetNo As Integer, ByVal enAxisIndex As OffsetAxisIndex2Enum, ByVal enSubSystem As SubSystemEnum, ByVal enCuttingPosition As CuttingPositionEnum) |
| CTools | AddConstantToolWear(ByVal intOffsetNo As Integer, ByVal enAxisIndex As OffsetAxisIndex2Enum, ByVal enSubSystem As SubSystemEnum, ByVal enCuttingPosition |

| | |
|----------|---|
| | As CuttingPositionEnum) |
| CTools | SubtractConstantToolOffset(ByVal intOffsetNo As Integer, ByVal enAxisIndex As OffsetAxisIndexEnum, ByVal enSubSystem As SubSystemEnum, ByVal enCuttingPosition As CuttingPositionEnum) |
| CTools | SubtractConstantNoseRadiusCompensation(ByVal intOffsetNo As Integer, ByVal enAxisIndex As OffsetAxisIndex2Enum, ByVal enSubSystem As SubSystemEnum, ByVal enCuttingPosition As CuttingPositionEnum) |
| CTools | SubtractConstantToolWear(ByVal intOffsetNo As Integer, ByVal enAxisIndex As OffsetAxisIndex2Enum, ByVal enSubSystem As SubSystemEnum, ByVal enCuttingPosition As CuttingPositionEnum) |
| CProgram | SelectScheduleProgramLSide(ByVal strScheduleProgramFileName As String) |
| CProgram | SelectScheduleProgramRSide(ByVal strScheduleProgramFileName As String) |
| CMachine | Public Sub SetUserAlarm(ByVal enAlarm As UserAlarmEnum, Optional ByVal strAlarmMessage As String = "", Optional ByVal enUserAlarmSubSystem As UserAlarmSubSystemEnum = 0) |
| CMachine | Public Sub ClearUserAlarmD(ByVal enUserAlarmSubSystem As UserAlarmSubSystemEnum) |

Note: User Alarm will require OKUMA.Lathe.UserAlarm license feature in order to function on OSP-P200 or newer controls if machine can support.

3. Change/New

None

4. Known Bugs and Limitations

This section identifies known and existing problems in this release and describes any work-arounds.

NOTES: Threading

All THINC-API objects must be created and called from STA threads ONLY. Threads created by Window System such as thread pool which are under MTA threads cannot be supported.

4.1 Defect

4.1.1 General Defect

DATA-API library, Okuma.CLDATAPI.dll, cannot create directly under ASP.NET web application.

Solution/Work-arounds: Create and initialize DATA-API in a separate thread. All function calls must be called from objects created inside separated thread mentioned above.

DATA-API library can only support applications designed with single-threaded apartment of COM threading model. The underlying library, LDATAPI.dll, cannot be loaded during call to CMachine.Init function when an MTAThread attribute is applied to the application.

Solution/Work-arounds: None

| | |
|-------------------------|-----------------------|
| THINC-API | Version: S5015-008-38 |
| Release Notes For Lathe | Date: 06/28/2024 |

4.1.2 Firebird Database Log File

THINC-API libraries compiled with .NET Framework 1.1 use Firebird Database engine. The log file created by Firebird database engine can be corrupted, unexpectedly.

Solution/Work-arounds: A bat file is created during the installation of THINC-API and will be executed every time Windows is first started to replace the existing log.fdb located in "D:\Program files\Okuma\LoggingService" to prevent file corruption.

New THINC-API libraries that compiled with .NET Framework 4.0 will use SQLite database for its logging service. All applications should use new version THINC-API if possible to prevent using Firebird database and to be compatible with Windows 10.

4.1.3 Data-API

4.1.3.1 MacMan.COperationHistory class

Function:

```
Int32 COperation* GetOperationHistory(Int32 intIndex) ;
ArrayList* GetOperationHistory(Int32 intFromIndex, Int32 intToIndex);
Int32 GetMaxCount() ;
Int32 GetCount() ;
```

Symptom: Failed to get correct data for Subsystem L and R side if MacMan screen is different than current setting of subsystem. It always gets the data from current MacMan screen.

Solution/Work around: None

4.1.3.2 CAxis class

Function:

```
Double GetActualPositionProgramCoord(AxisIndex1Enum enAxisIndex)
Double GetTargetPosition (AxisIndex1Enum enAxisIndex)
```

Symptom: The Z-axis position for sub system NC-AL and NC-AR does not return data correctly. It is based on the current selection of spindle in NC panel or command program G140/G141.

Solution/Work around: None

4.2 Defects Fixed in this Release

Symptoms: Failed to detect functions that can be supported in P500.
